Welcome to your recovery program.

Did you know that people just like you, enter addiction treatment programs every day? Yes, they do. People from all walks of life and all kinds of jobs and all kinds of families find their use of opioids (prescriptions opioids, heroin, injecting, pill taking or smoking, and more...) becomes a problem. That is where we come in, The UAMS/PRI Center for Addiction Services & Treatment Program (CAST). We understand how an addiction can affect all parts of your life. We also understand that you did not start taking opioids or other drugs or did other addictive behaviors; thinking they would cause so many problems for you. You, like many people started taking opioids for one of many reasons, like:

“Feeling high feels good!”

“I need them for my pain.”

“It helps make my bad memories to go away, for a while.”

“I like getting high with my friends.”

Whatever reason you began taking opioids, you are welcome here. We understand it was not easy coming here to ask for help. We respect your decision for coming here for help, regardless of the reason.

We believe that *Recovery is a reality*. It can, does and WILL happen. Let’s work together and share ideas how you can achieve recovery and begin to achieve your hopes and dreams.

The Nuts and Bolts of Your Program

Your Schedule

When you first start your recovery program here, you will come to the program weekly to get your medication and to meet with different staff like the doctor, the nurse, office staff or your counselor. There are many reasons for you to come to the program weekly and these reasons include:

- Your personal safety-To make sure that your dose of medication is safe, effective and meets your needs.
- Your personal treatment plan-You will need to meet with the doctors, nurses and counselors to help them develop a treatment plan that will help you remain safe, free from drug use, and move towards achieving your life goals.

Program Hours

Hours of Operation:

Monday through Friday 7:00 am to 5:00 pm (6:30 AM-2:30 PM for Urine drug screens)

Saturday/Sunday Closed

After-Hours Emergencies

If you believe that you are having a medical emergency, please call 911 or go to your nearest Emergency Room. It is important that anytime you are in an emergency situation that you inform the 911 respondents or physician treating you that you are on medication for opioid use disorder (buprenorphine).

In the event of an after-hours emergency, when a physician, or 911 respondent or someone from law enforcement or jail needs to confirm your buprenorphine dosage, they can call our after-hours phone number of (501) 686-5000. Please do not call after hours for matters that can be addressed during normal business hours.

Disasters-Storms, Hurricanes, Earthquakes, and More...

In the event of a natural disaster or other local emergency, or if you hear that a big storm is approaching the area near the program, please contact the Opiate Treatment Program (OTP) during business hours. After-hours emergency phone at (501) 686-5000 can be used to determine whether our facility is open for medication dispensing if a disaster has just occurred. In the event a natural disaster prevents us from opening, we have an emergency dosing agreement with nearby clinics in addition to an emergency plan to establish a secure alternate dosing location. We will tell you about this alternative dosing site, if needed. If you have other questions about Emergency Preparedness planning, please speak with the Clinic Manager or Your Counselor.

When we know that a dangerous weather condition is approaching our program, we may receive authorization to provide prescriptions of medication to get you through the weather event until we reopen. We will let you know about this as soon as it occurs.

Your Recovery Team

Your recovery team will include:

- **Office staff**-They will help you with information about the program's services and fees.
- **Counselors/Therapists**-You will be assigned to a counselor/therapist to help you develop recovery strategies. Your counselor/therapist will meet with you at scheduled times to help you develop a treatment plan to identify your recovery goals and encourage you to meet those goals.
- **Nurses**-The nursing staff will provide education on the use and potential safety issues regarding your medications and behaviors that you should avoid, to remain safe.
- **Doctors/Physician Assistant**-You will have an appointment with a doctor/physician assistant to do a psychiatric evaluation and physical exam as part of your admission process. The purpose of this interview is for the doctor to gain an understanding about your addiction to opioids and to learn about your medical and mental health history.

Your Recovery Team has staff on duty who are trained and proficient in the following:

- Cardiopulmonary Resuscitation (CPR) through an Evidenced-Based Training program
- Management of Opioid/Opiate Overdose
- Management of Medical Emergencies
- Other relevant techniques associated with the care and management of persons in Opioid Treatment Programs using Medication-Assisted Treatment for Opioid Use Disorders (MOUD).

Pregnancy and Recovery

If you are pregnant and on buprenorphine, you are doing something very wonderful for yourself and your baby. Medications for Opioid Use Disorder (MOUD) can help prevent the withdrawal symptoms many drug users experience when using. Withdrawal from opioid use for pregnant women can be especially dangerous because it causes the uterus to contract and may bring on miscarriage or premature birth. By blocking withdrawal symptoms, MOUD can save your baby's life. Additionally, MOUD can help you stop using needles, which is a primary route of infection for drug users. More importantly, it can allow you to regain your quality of life. We want to say again, "You have made a very good decision to seek help for your opioid addiction."

Your recovery team of physician, nurses and counselor will assist you in obtaining prenatal care and work with local healthcare resources to help plan for the delivery of your baby. Early planning can help limit withdrawal symptoms that your baby may experience.

PLEASE LET YOUR COUNSELOR KNOW IF YOU BECOME PREGNANT WHILE IN TREATMENT, YOU MAY BE REFERRED TO THE WOMEN'S MENTAL HEALTH PROGRAM.

CRITERIA FOR ADMISSION

The following criteria is required for admission for the Buprenorphine program. Criteria is based on factors that are common for persons to be successful with Outpatient Buprenorphine Treatment for Opioid Use Disorders:

- Motivated toward treatment and desire for recovery as defined as: living life without substance use.
- Willingness to commit to the full attendance and participation in program activities until your goals for recovery have been successfully achieved as determined in collaboration between you and your treatment team.
- Demonstrating a willingness and the ability to abstain from all mood-altering chemicals without the need for a higher level of care requiring more intensity and structure (i.e....residential treatment) that cannot be provided through an outpatient setting.
- Clients need to be psychologically stable to reduce and/or eliminate any interference with the collaborated treatment goals established by you and the treatment program.
- Any medications you may be prescribed or over the counter medications can be monitored effectively by the treatment team on an outpatient basis.
- Employment or being constructively active with your personal time is a key ingredient for success in outpatient OUD treatment.
- Outside (out of clinic) Support System is a major part of recovery and a key for long-term/ongoing success in recovery. Support Systems include, but are not limited to - family, home, and work - (preferably not working or living in an environment where chemicals are easily accessible). Being willing to have your family participate in treatment is very important. Remember, Substance Use Disorder is not just a disease that affects one, but a disease that affects the entire family.
- It is important that you are able to attend the clinic during business hours and be responsible for financial commitments to be successful in your treatment.
- Reliable transportation is a must so that you can not only attend clinic activities associated with your treatment, but also to attend support group activities, employment and other obligations your recovery will allow you to address.

Program Fees and Costs

You will meet with a member of our office staff who will inform you about the costs of your treatment. It is important that these fees are clear to you, so you can make plans to meet your financial responsibilities for treatment regularly and on time. If you have had issues before on money management or not being able to meet financial commitments, it is important that you discuss this with your counselor. Your counselor can help support you in gaining the skills you will need to keep up with your financial responsibilities.

CLINIC FINANCIAL POLICY AND FEES

All fees are due at the time that services are rendered. Patients will not be provided with any service, including prescription medication, if financial accounts are not current.

Upon admission, you should have received a copy of our financial policy. We ask that you abide by this policy to avoid any interruptions in your clinic program.

UAMS-CAST does not accept checks, debit, or credit cards without preapproval by the Clinic Manager. We ask that you keep your fees current to avoid balances carried on accounts.

When you make payment for services, you will receive a receipt. If needed, your counselor has the ability to print a comprehensive statement for your use.

Patient's seeking readmission who have previously left UAMS-CAST and have a balance due will not be eligible for readmission until their past due balance has been cleared or a payment plan has been arranged.

Any changes in financial obligations or arrangements must be requested in writing on the financial communication form, which can be obtained from the forms tray in the waiting room. The form needs to be addressed to the current Clinic Manager. The Program Director, Medical Director, Nursing Staff, and Counseling Staff do not handle financial matters.

Patients who are experiencing financial problems should contact the Clinical Manager as soon as possible. If needed, the Clinic Manager may bring this issue before the staff during weekly staff meetings.

CLINIC FEES

> Admission/Weekly Fees: Any admission fee, co-pay or out of pocket expense is determined by an individual's insurance or healthcare plan a client is covered by. Consult your insurance provider/carrier for any costs associated with your care

Additional Fees based on services that are available and but may not be covered by a client's insurance or healthcare plan are:

- > Physician Visit: \$20.00
- > Urine Drug Screen: \$25.00 - \$50 for additional screens not included in the routine drug screen
- > Form Letter Preparation - \$15.00
- > Transfer (Medical Record Request) - \$35.00
- > Photocopy Charges: \$1.00 per page
- > Fax Charges: a. Local - \$2.00 per page b. Long Distance – \$10.00 per page

INSURANCE

Please remember that UAMS/CAST is not responsible for any changes to your benefits such as Out of Pocket Minimums (Deductibles) and/or Co-Pays that may be incurred in the future.

**** Patients are ultimately responsible for payment of services regardless of Insurance status.**

Your Recovery Program and Planning for Success

Introduction to Your Recovery Process

The *Substance Abuse and Mental Health Services Administration* (SAMHSA) states “There are many pathways to recovery. Individuals are unique with specific needs, strengths, goals, health attitudes, behaviors and expectations for recovery.” We believe that too. Each person who has an addiction to opioids has his or her own path to follow to find their own healing. We are experts at giving individuals in recovery ideas that we know work in helping you heal from your addiction or mental health challenges. Please be open to asking for help. We will be there in support of your ideas for change and recovery.

Your First Week in Treatment

You will be given an appointment time for your first medication management appointment with your doctor. It is important that you arrive on time for your doctor appointment. If you arrive late, the doctor may not be available, and you will not receive a prescription for your buprenorphine if not seen by the doctor. If you are just getting started on buprenorphine the physician and you will determine a starting dose and any needed dose adjustments. This dose will be based on your opioid use history, your current health and State and Federal regulations.

You will be instructed to come weekly for your buprenorphine prescription until you complete your first stage of recovery. It is important that you report any potential side effects from your buprenorphine. Side effects may include: light--headiness, dizziness, extreme tiredness, nausea, vomiting, sweating, ankle swelling, or skin rash, constipation, dry mouth, flushing of the face, low heart rate, faintness and fainting, problem urinating, changes in sexual drive, irregular menstruation, joint pain, joint swelling, and numbness and tingling in hands and feet. ***If you experience any of these symptoms, please let the nurse know as soon as possible.***

Your Recovery Responsibilities

In your recovery from opioid use disorder, there are actions that you can take that help support your recovery and reduce the likelihood of you relapsing back into behaviors that are not healthy or safe. Below is a list of responsibilities your recovery team needs from you, so we can support you to the best of our abilities. If you do not understand any of these, please ask your counselor or other staff member to answer your questions:

- Please provide accurate and complete information about your current health, past illnesses, hospitalizations, medications and other matters relating to your health, so we can help support and keep you safe.
- Please inform us if you have any questions about or do not understand the care or treatment that you are being given. This is the only way we can help you get answers that will help you move forward in your recovery.
- We need you to inform us if there are any changes in your condition or if medical, legal or personal problems arise during your treatment. We can't help you with problems that we don't know about.
- Please support a safe and peaceful environment in the CAST clinic. You can do this by being courteous and considerate of other patients and clinic staff.
- Please respect State and Federal confidentiality regulations regarding any information on other patients' information or care. ***Respecting confidentiality regulations is a legal requirement to remain in the clinic.***
- Please keep your current and emergency contact information up to date so that staff may contact you or your emergency contact if necessary.
- Please understand that since you are getting a controlled substance for your OUD treatment, you are required to participate in the Medication Call-back system as follows:
 - a. You will be contacted at your current phone number early in the morning.
 - b. If you answer the phone you be informed that you have a call-back.
 - c. If you do not answer a Voice Mail will be left requesting a call back to the clinic ASAP. We will not leave information that you have a call back to protect your confidentiality.
 - d. Therefore it is important that you have a voicemail set up and check your voicemail.
 - e. You have the remainder of that day and the following days between the hours of 6:30 AM and 2:30 PM to return with your current buprenorphine containing medications to be counted and to provide a UDS.
 - f. Failure to present for any reason may result in a loss of Phase to include quarterly.

Take-Home Medication

You will be offered what is called “take-home” Buprenorphine (Suboxone) (Your Prescription) based on your recovery accomplishments. You may be offered up to one (1) week of medication during your first 30 days in treatment, and up to 2 weeks in your second 30 days of treatment. Your provider and therapist will give you more information on how much medication you may be prescribed in future phases of treatment.

Detailed information on all phases are located later in this handbook.

Recovery accomplishments that can help you earn take-home privileges for all phases include:

- Absence of recent abuse of drugs (opioid or non-opioid), including alcohol;
- Regular clinic attendance;
- Absence of serious behavioral problems at the clinic;
- Absence of known recent criminal activity, e.g., drug dealing;
- Stability of your home environment and social relationships;
- Assurance that take-home medication can be safely stored within your home; and
- Whether the rehabilitative benefit that you derived from decreasing the frequency of clinic attendance outweighs the potential risks.

When you receive take-home medications (your prescription), for safety purposes, we ask that you secure them in a locked box in a secure location within your residence. In addition to safeguarding your medication from loss/theft, this will also prevent children from accessing your medication.

Your counselor will give you more take-home medication information, once you begin receiving take-homes.

Diversion of Buprenorphine

What is “diversion?” Wikipedia defined diversion as *“a medical and legal concept involving the transfer of any legally prescribed [controlled substance](#) from the individual for whom it was prescribed to another person for any illicit use.”*

Take-home diversion would be any attempt to sell a take-home medication (Your prescription) or to give or trade it for other substances. Either of these actions are dangerous and illegal. Federal and State regulations require that this treatment program has a “call back” process in place. This means that if you receive take-home medications (your prescription) that you will be called back from time to time to bring in your medication for inspection and to be counted.

If your medication is stolen, in order for a new prescription to be written by the medical staff, you must file a police report. We will only replace your medications one time.

Your Program Activities

The care and recovery activities at this program are based on what is known as “Evidenced Based Practices.” Evidence Based Practices are therapies or interventions that have been proven through research to be effective in treating addictions like yours. Our Evidenced Based Practices are used in:

- Medication protocols.
- Individual Counseling
- Nursing Educational Activities.
- Physician Educational Activities.
- Counselor Educational Activities.

Evidence Based Practices, including the medication that you have been prescribed, are part of a “recovery menu” we offer you, of optional and required activities. Required recovery activities include:

- Comprehensive biopsychosocial assessment-This assessment is done through meetings with a physician, nurse, counselor and office staff. We cannot partner with you for your recovery success without getting to know you.
- Individual sessions with your counselor-These sessions give you a chance to let your counselor know what your personal goals are for recovery and also to ask for help with life issues that you find challenging to improve.

Your Drug Testing

Research shows when someone is addicted to drugs, the fact of knowing that they will be regularly tested for drug usage, affects the choices they make. One of these choices is whether or not to use non-prescribed substances or prescriptions that an outside doctor has prescribed for you but you haven’t told the program doctor about. This also includes drinking alcohol. ***Buprenorphine is a powerful medications to support recovery but mixing this with drugs or medications that are not approved by the CAST clinician can be life threatening.***

- Urine specimens are routinely screened for Buprenorphine, Methadone, Opiates, Fentanyl, Cocaine, Barbiturates, Benzodiazepines, Amphetamines, Marijuana, and alcohol; however, based on local threat assessments or reports of other substances in the local area, UAMS-CAST reserves the right to add additional chemicals to the screen.

- Before your check-in for your appointment with your provider you will be expected to provide a Urine Drug Screen (UDS). You will be escorted to one of three dedicated collection restrooms to provide your urine sample. Please be advised that the collection restrooms are equipped for the clinic staff to observe the collection of your specimen. Only one (1) patient may be in the collection restroom at a time. If you depart UAMS-CAST without providing a urine sample your drug screen will be considered positive.

** UDS will be collected the day before your appointment, or the day of your appointment, or the day after your provider (MD/PA) appointment. UDS collection times: 6:30am-2:30pm each day.

**** Please remember to come 15 minutes prior to your provider (MD/PA) appointment so you can complete your UDS prior to your appointment. If you do not complete your UDS before your provider (MD/PA) appointment, your prescription will be held at the front desk until UDS process is completed.**

****Manipulation, dilution, or falsification of urine specimens, in any manner, are strongly discouraged and may lead to immediate removal from UAMS-CAST.**

Staying Safe / Medication Use

In the section above, Your Drug Testing, the topic of use of non-prescribed or not approved drugs or medications was discussed. We want to emphasize our commitment to support your wellness and personal safety. Buprenorphine has been tested and studied and has proven effective as a support for recovery from opioid use disorders. However, as with most drugs, they can only be safely used when the OTP physicians, nurses and counselors know all other prescription medications, over the counter medications, health supplements and non-prescribed drugs that you may be taking. Using any other medications or drugs, while taking buprenorphine may threaten your wellness or even your life. If you have any questions about medications or drugs you are taking, please ask your doctor or nurse or counselor.

Your Rights

Patient Rights

Listed below are your patient rights as identified by the State of Arkansas. Beyond State required patient rights, we want to make sure that you feel respected and that your individual needs are being listened to and addressed by UAMS-CAST Staff. If you believe that anyone on the CAST Team has not been respectful of you as a person or of your rights, we recommend that you bring these concerns to your counselor/therapist for discussion. If you feel you cannot resolve that issue with your counselor/therapist, you are invited to discuss your concerns with the Clinic Manager. Hopefully you and the Clinic Manager can resolve the issue. If you do not accept the resolution, then you are free to file a formal grievance with the OTP. ***Your Patient Rights are contained on the University of Arkansas for Medical Sciences, Psychiatric Research Institute Patient Rights and Responsibilities located on page 49-52 of this handbook.***

Grievance Procedure

If you believe that you could not successfully resolving your concern or complaint through your counselor or the Program Director, then you may fill out a formal grievance form. You may request, in writing, a meeting with the Clinic Manager. The Clinic Manager will meet with you to review the grievance within two (2) working days.

- You have the right to bring witnesses or Patient Advocates to the meeting with the Clinic Manager.

- If you are unable to communicate in writing for any reason, you can verbally dictate your concern or complaint to the Clinic Manager. Both You and the Clinical Manager will review the statement for accuracy and you and the Clinic Manager sign your statement.

The Clinic Manager will present your concern or complaint to the Treatment Team, including the Program Director and Medical Director. They will review your concern or complaint and render a decision. The Clinic Manager will respond, in writing, within 1-2 business days from this meeting. If you disagree with the decision or the recommended resolution, you may appeal the decision to one of the agencies listed below.

- Concerns relating to your prescription of Buprenorphine will be addressed to the Medical Director and your Provider and their decision will be based on medical protocols and will be final.

- If your concern or complaint is not resolved to your satisfaction by the process above, your concern will be referred to the PRI Compliance Officer as well as the Division of Aging, Adults and Behavioral Health Services (DAABHS).
- If you feel you have been the subject of any form of discrimination, please notify the Clinical Manager in writing as soon as possible. Your concerns will be forwarded and investigated by the PRI Compliance Officer based on UAMS policies and the Civil Rights Act of 1964.
- If at any time you feel your confidentiality has been violated by anyone associated with your treatment program, please contact your counselor or Clinic Manager as soon as possible. You will be asked to complete a written statement that will be submitted to the Clinical Manager, who will immediately conduct an investigation. Corrective actions will vary based on State and Federal Laws and whether the person reported is a staff member or another patient or outside agency or person.

As a UAMS patient, you may address these decisions or other concerns to any one of the following UAMS, State of Arkansas or Federal agencies:

- UAMS PRI Compliance Officer at 501-526-8100 and/or; submit a written concern or complaint to the UAMS HIPPA Office at the following mailing address: 4301 West Markham, Slot #829, Little Rock, AR 72205
- State Opioid Treatment Authority at 501-251-6503
Mailing Address: Division of Aging, Adults and Behavioral Health Services. Attention State Opioid Treatment Authority; P.O. Box 1437, Slot W241, Little Rock, AR 72203-1437
Physical Address: 700 Main Street, Little Rock, AR 72205
- U.S. Department of Health and Human Services Office of Civil Rights at Office of Civil Rights, Medical Privacy, Complaint Division, 200 Independence Ave., SW, HHH Building, Room 509 H, Washington, D.C., 20201

You will find a copy of Program Grievance Form in the Forms Section of this Handbook

Program Recovery Environment

Peaceful Respect of Others

As we have already stated in your Handbook, “Safety comes first.” This means safety for you, for other patients, for staff and for visitors. Many patients have been in places that felt unsafe and have had to live with those negative and fearful feelings. At UAMS/CAST we believe that it is very difficult for patients to heal when they don’t feel safe, as well as staff looking forward to coming to work in an environment where they feel safe and productive. We support your personal safety in the following ways:

Communication in Recovery

The language you use in recovery is important to you and to those around you. For that reason, we recommend that you are mindful of the words you chose and how you say those words. In a recovery environment profanity, judgmental words or angry words are hurtful to others and not compatible with the peaceful recovery environment at UAMS/CAST. If members of your recovery team ever request that you reduce your speaking volume or ask you not to use certain words in public spaces, please listen to them, since their intentions are to help your recovery awareness and preserve the peace of the program. We thank you for your mindfulness about your communication style and words.

Communication Outside of Session

Occasionally a patient may need to speak to their doctor or therapist outside of their scheduled appointment. Providers of PRI are asked not to give out cell phone number to patients. Therefore, calling the clinic and leaving a message for the provider to return your call will be your ideal way of communication. While some providers may give out email addresses or direct phone lines, please understand that these are not monitored during the day, holidays or when a provider is on leave. The email accounts and direct phone numbers can go hours or days without being answered. Please call the main clinic and leave messages for anyone you need to contact.

Presenting Yourself in Recovery

UAMS/CAST is a place where you will be doing a lot of hard work, to learn new coping skills and learn to make decisions that will support you from using opioids. When you are here, it is your “work site.” As your work site and the worksite of others, we request that you dress appropriately and respectfully. Wearing any clothing with profanity or sexual suggestions or hate speech or advertisements of alcohol or drugs printed on it is never appropriate in a recovery environment. We thank you for your mindfulness about what you wear to this recovery environment.

Only children eighteen (18) months and younger are authorized in UAMS/CAST.

Unsafe Not-in-Recovery Actions

Your recovery team members want all patients to be successful in recovery at UAMS/CAST. If a patient has challenges in recovery, we always want to look for solutions that will keep that person on their path to recovery. However, there are behaviors that are not compatible with a recovery environment. Behaviors that are not permitted and/or can or will result in law enforcement being contacted and exclusion from this program include:

- Violent conduct or threatening behaviors toward other patients or staff or visitors.
- Disruptive conduct or behavior.
- No weapons are permitted on UAMS property and ask that you leave them at home.
- Dealing drugs.
- Repeated loitering.
- Drug paraphernalia.
- Consumption of Alcoholic Beverages or having them on your person on UAMS property
- Failure to follow UAMS/CAST policies with observable, negative effect on your recovery, or the recovery of others or preventing program, staff from being able to do their jobs.

Confidentiality

We understand how important it is that all information about your treatment remains confidential. Our program complies with all State and Federal regulations, HIPAA (45 CFR Part 160 and Subparts A and E of Part 164), Confidentiality of Substance Use Disorder Patient Records (42 CFR Part 2), Certification of Opioid Treatment Programs (42 CFR Part 8) and all state regulations governing confidentiality.

To protect everyone’s confidentiality, cell phones must not be used or be visible while you are in the clinic.

Tobacco Use

UAMS, Arkansas State Hospital and John L. McClellan Memorial Veterans Hospital combined is considered a Campus of Higher Learning under Arkansas Law. Tobacco Use (smoking/dipping) to include use of Vapes is not permitted anywhere within the confines of the Joint Campus to include parking lots/decks IAW Arkansas Law. IAW Arkansas Law, that includes your personal vehicle while parked on campus and/or driving on campus. There are no designated Tobacco Use/Vaping areas anywhere on campus property.

Persons who chose to use tobacco products or vape on campus will be issued citations by campus law enforcement and may be fined anywhere from \$100-\$500 by the Little Rock Municipal Court.

We support wellness. Research tells us that even secondhand smoke is not supportive of good health and can be potentially life threatening. If you use tobacco of any kind or vape and would like to discuss cutting down your use of tobacco/nicotine or stopping your use, please ask your counselor/therapist for assistance. This service is available as a part of your clinic treatment or your counselor/therapist can assist you in referral to a tobacco cessation program of your choice.

Pets and Service Animals

For safety reasons and some person's fear of animals, pets are not permitted inside UAMS/CAST. If you have a designated Service Animal (SA), you will be required to provide documentation IAW Arkansas Law of the animals documented service status and all shots/exams are up to date.

Service animals are permitted in all university areas, including campus housing, with the exception of those areas where specifically prohibited due to safety or health restrictions, where the service animal may be in danger, or where use of the service animal may compromise the integrity of research.

Service Animal Handlers must:

- Attend to and be in control of the SA at all times, including care and supervision of the animal
- Keep the animal under their control at all times. A harness, leash, or tether is required unless the handler is unable to use any of these restraints. In such cases, the animal must be under the handler's control by another effective means such as voice control, signals, or other effective means.
- Assure that the animal does not display any behaviors or noises that are unduly disruptive to others.

Service animal (SA) is defined by UAMS Academic Affairs Policy 2.2.7 as follows: a dog that is individually trained to do work or perform tasks for the benefit of an individual with a disability. Service animals in training are included in the definition of service animal for the purpose of this policy. This definition does not include an Emotional Service Animal.

Loitering (What a strange word!)

State and Federal regulations do not permit patients to remain in the clinic after they have received their prescription and or therapy. Therefore, we request that you leave once your business is completed at the clinic.

Planning for Success

Current Buprenorphine Phase System

Phase 1:

Minimal participation requirements

One (1) individual counseling session per week

One (1) Medication Management Appointment with your prescribing provider per week

Weekly Urine Drug Screens

Weekly Self-Help groups are highly encouraged (12-Steps; Faith Based i.e. Celebrate Recovery; Recovery based; Medication Assisted Recovery Anon (MARA)).

** Patients are reminded that counseling is a very important part of recovery (about 90%) and that patients who are absent from both counseling and medication management appointments will delay their ability to advance in phase.

Phase 1A: (For patients who continue to test positive for Stimulants (i.e. Cocaine, Methamphetamine) and Non-Prescribed Benzodiazepines after four (4) weeks in Phase 1)

Minimal participation requirements

One (1) individual counseling session per week

One (1) Medication Management Appointment with your prescribing provider every two weeks

** Please note, second week prescription will be provided after attending counseling session for the second week.

Weekly Urine Drug Screens

Weekly Self-Help groups are highly encouraged (12-Steps; Faith Based i.e. Celebrate Recovery; Recovery based; Medication Assisted Recovery Anon (MARA)).

Phase 2:

Minimal participation requirements

One (1) individual counseling session with your Therapist/Counselor every two (2) weeks.

One (1) Medication Management appointment with your prescribing provider every two (2) weeks.

Bi-Weekly Urine Drug Screens

Weekly/Bi-Weekly Self-Help groups are highly encouraged (12-Steps; Faith Based i.e. Celebrate Recovery; Recovery based; Medication Assisted Recovery Anon (MARA)).

Phase 2A: (For patients who continue to test positive for THC and prescribed Benzodiazepines)

Minimal participation requirements

One (1) individual counseling session with your Therapist/Counselor every two (2) weeks.

One (1) Medication Management appointment with your prescribing provider every two (2) weeks.

****Medication Management / Therapy Appointments will be on alternating weeks. Patients will receive second week prescription after attending counseling session the following week)**

Bi-Weekly Urine Drug Screens

Weekly/Bi-Weekly Self-Help groups are highly encouraged (12-Steps; Faith Based i.e.

Celebrate Recovery; Recovery based; Medication Assisted Recovery Anon (MARAA)).

Phase 3: (For patients continuing to use THC and prescribed Benzodiazepines.)

Minimal participation requirements

One (1) individual counseling session every 3-weeks

One (1) Medication Management appointment every three (3) weeks

Urine Drug Screens will be random

Monthly Self-Help groups are highly encouraged (12-Steps; Faith Based i.e. Celebrate Recovery; Recovery based; Medication Assisted Recovery Anon (MARAA)).

Phase 4: (For all stable patients with Negative UDS results)

Minimal participation requirements

One (1) individual counseling session every four (4) weeks

One (1) Medication Management appointment every four (4) weeks

Urine Drug Screens will be random

Monthly Self-Help groups are highly encouraged (12-Steps; Faith Based i.e. Celebrate Recovery; Recovery based; Medication Assisted Recovery Anon (MARAA)).

Quarterly Phase:

Patients may transition from Phase 4 to Quarterly Phase status once the following criteria has been met:

- Negative UDS for minimum of one year and no prescriptions for benzodiazepines.
- All individual and medication management sessions have been attended on a regular basis.
- Demonstration of stability on you medication to MD/PA as exhibited by the following over the past year: no loss of and/or theft of medication; no overtaking and/or undertaking your medications.
- Ability to make all callbacks (including medication count)
- Have a phone with voice mail set up
- Make your payments on time
- Must have a callback in the month prior to moving up to quarterly
- Determined to be clinically stable by the treatment team

Minimal participation requirements

One (1) individual counseling session every quarter (every three (3) months)

One (1) Medication Management appointment every quarter (every three (3) months)

Urine Drug Screens will be random

Monthly Self-Help groups are highly encouraged (12-Steps; Faith Based i.e. Celebrate Recovery; Recovery based; Medication Assisted Recovery Anon (MARA)).

* **Excused absence** is defined as an absence that was agreed to prior between counselor and patient and/or a documented absence (i.e....medical appointment, employment issue, incarceration, funeral, etc....)

Buprenorphine Dosage and Stabilization

Both the induction and withdrawal of Buprenorphine will be according to orders that are given to the Nursing Staff by the Medical Director and the Medical Director's decision will be final. Each patient will stabilize on a dose tailored to his or her own needs; therefore, what is effective for one may not be effective for another. Patients should not discuss their dosage with other patients.

**** No individual under the age of 18 will be prescribed Buprenorphine. Patients receiving Buprenorphine should expect to adhere to the same Phase System that is outlined above.**

Buprenorphine

Buprenorphine is an opioid drug that can be harmful if taken without medical supervision. The goal of Buprenorphine treatment is your total rehabilitation and the duration of treatment can continue until your goal is met. Periodic consideration will be given concerning complete withdrawal from Buprenorphine. Eventual withdrawal from all drugs is your treatment goal. All over-the-counter and prescription medications and/or herbal remedies you take must be discussed with your treatment counselor or physician. You should avoid all benzodiazepines, sedative hypnotics, tranquilizers and narcotics. Below is a list of drugs that influence the action of Buprenorphine:

Medications and food that lower the level of Buprenorphine in your body:

Efavirenz (Sustiva/Stocrin)	St. John's Wort
Nevirapine	Troglitazone
Barbiturates	Rifabutin
Carbamazepine (Tegretol)	Delaviridine
Glucocorticoids	Indinavir
Modafinil	Nelfinavir
Phenobarbital	Phenytoin
Rifampin	Ritonavir

Medications and food that increase the level of Buprenorphine in your body:

Delaviridine	Cimetidine	Indinavir	Clarithromycin
Mibefradil	Voriconazole	Ritonavir	Nelfinavir
Diltiazem	Amiodarone	Erythromycin	Aprepitant
Fluconazole	Chloramphenicol	Fluvoxamine	Gestodene
Verapamil	Imatinib	Itraconazole	Ketoconazole
Mifepristone	Nefazodone	Norfloxacin	Norfluoxetine
Diethyl-Dithiocarbamate			

FOODS TO AVOID:

Grapefruit Juice

Long Term Side Effects (Potential)

Opioid-Induced Endocrinopathy (OIE) – OIE is a common side effect of long-term use of opioids or persons in long-term opioid therapy (for medical or substance use disorders) where levels of sex hormones, growth hormone, cortisol and dehydroepiandrosterone (DHEA) may decrease. Treatments are available and patients are strongly encouraged to discuss this condition with the Medical Director and with their Primary Care Provider for evaluation and treatment.

Opioid-Induced Bowel Dysfunction (OIBD) – OIBD may develop in some persons who are on long term and/or chronic use of opioids. There is a wide range of symptoms that include chronic constipation, decreased gastric emptying, abdominal cramping, spasm, bloating, delayed GI transit and the formation of hard dry stools. Treatments are available and patients are strongly encouraged to discuss this condition with the Medical Director and with their Primary Care Provider for evaluation and treatment.

Chronic Dry Mouth – Persons on long-term medication therapy can develop chronic dry mouth. This condition comes from taking various medications to include opioid medication. Untreated dry mouth can lead to oral and dental conditions (i.e.... tooth decay) and changes in appetite. Patients should see their dentist to discuss appropriate treatments if they currently have gum or dental issues. Patients may use Over-The-Counter Commercial mouth rinses or gum to address dry mouth. Patients should avoid alcohol-containing mouth rinses and washes and chose a commercial mouthwash designed for people with dry mouth instead.

Treatment of Constipation

Moderate tolerance develops to the constipating effect of Buprenorphine, but may take as long as a year or more. Treatment of this side effect is sometimes necessary and a reduction in dosage may be helpful in some instances. Harsh laxatives are to be avoided and dependence on them should be avoided. It is important that the patient vary his or her diet to include grains and fibers. The following measure is standard treatment for constipation.

Use of stool softener such as Docusate Sodium (250 milligrams).

*(Take as directed).

Use of a lubricant, such as Mineral Oil.

*(Take as directed).

Use of a natural laxative, such as Stewed prunes six (6) – ten (10).

*(Drink at least 3-4 quarts of water daily).

Overdose Precautions

Drug overdose is an emergency medical situation in which a person has received or used more drugs than their body can handle. It is life threatening.

Buprenorphine is a powerful medication which, when used correctly, can eliminate withdrawal symptoms and allow for daily functioning; however, using other drugs, including “Street

Buprenorphine”, while taking prescribed Buprenorphine, can produce serious and dangerous life-threatening reactions and effects such as:

- Nausea and vomiting
- Respiratory depression or respiratory arrest (difficulty breathing, stop breathing)
- Cardiac depression (slow or irregular heartbeat)
- Hypotension (low blood pressure)
- Death

It is very important that all patients in all phases of treatment be totally honest regarding the amounts, types, and frequencies of current drugs used. If any patient feels that their dose is not therapeutic, they should speak with any member of the medical staff.

Note: Should any person overdose or experience symptoms as the ones listed above, you should seek emergency assistance immediately by calling 9-1-1 or go to the nearest emergency room.

NARCAN Use

If you are concerned about your participation in Buprenorphine Treatment and still using Opioid’s, UAMS-CAST strongly encourages you to discuss the potential of carrying Narcan with you in case of an overdose. If you are interested, you can discuss this with your prescribing provider at the time of your medication management appointment. Patients may obtain Narcan at a local pharmacy of your choice over the counter.

Services to Women

UAMS-CAST will typically refer pregnant opioid use disordered patient to the Women’s Mental Health Program co-located on the 4th floor of PRI. At the time of admission, UAMS-CAST tests every woman of childbearing age for pregnancy. If pregnant, UAMS-CAST will be referred to the Women’s Mental Health Program (WMHP).

Services to Parents

UAMS-CAST will assist parents that are currently raising children and that are in the need of support with finding the appropriate resources needed and can facilitate making referrals for outpatient mental health services when requested.

Relationships

It is important that you involve your family in your treatment. Your family will need help learning to adjust to your new behavior. Your family is your emotional support system and important to your recovery. This would be an excellent time to get your family involved in drug prevention and awareness.

Loving, caring relationships begin and grow once real treatment of addiction occurs. Self-esteem and self-image are in a state of flux and are central to how you relate to your spouse or lover. No one likes

to talk openly about a problem with intimacy, physical and mental abuse, or sexual functioning, but trying to ignore the problem is a serious threat to buprenorphine treatment and to avoiding drugs or alcohol. We encourage you to discuss any unsatisfactory aspects of your relationship with your assigned counselor. Referrals to specialized services can be made to further assist you in discussing domestic violence or abuse issues.

Pain Management

Pain and its management are a frequent concern for opiate users. Buprenorphine patients bring these concerns into treatment. Many years of experience with buprenorphine patients demonstrate that following stabilization of one's buprenorphine dose, pain perception returns to a normal baseline. Exceptions do exist, for example, in patients with pain arising from nerve, bone or cancerous tissues.

There is no hard-and-fast rule regarding pain management while on buprenorphine. Physician or medical personnel will evaluate your pain and discuss any dose changes with the Medical Director.

Relapse

Re-using illicit or unauthorized drugs after being drug free can be a temporary slip. During your treatment, it is possible to learn skills and strategies to prevent a temporary return to drug use from snowballing into a total loss of your drug free goals, loss of family, loss of job and loss of health. For each patient there are unique reasons that trigger a relapse, including subconsciously setting up a situation where it is impossible to resist re-using. Being unprepared for the possibility of relapse is like not having a spare tire with you on a long journey. Patients enrolled in maintenance are able to attend group sessions, which can be set up by your counselor. All patients can attend individual sessions with your assigned counselor.

Sexually Transmitted Infections

HIV Survival Strategy

If you think you may have been exposed to HIV, it is of utmost importance to be tested. If positive, it is important to be treated early and closely follow the treatment regimen given. HIV tests are usually offered at no charge at public health clinics in most states, results are confidential. Keep yourself healthy. Make any lifestyle changes you need to make to promote overall good health and well-being. Make sure you have a balanced diet, plenty of rest, and regular exercise and relaxation. Avoid straining your immune system. Avoid acquiring other sexually transmitted diseases or using recreational drugs. Make sobriety a cornerstone for healthy living.

More HIV education information is included in this handbook and is available from the nursing and clinical staff.

Sexually Transmitted Infections

Many people with sexually transmitted diseases do not have symptoms and spread them without knowing it. Remember, the most important body part involved in making a sexual decision is your brain. There are many different tests for each of the different sexually transmitted diseases (STD's). Some can be tested with a simple blood or urine test. Some can only be tested by culturing body fluid from the penis, vagina or open sores on the body.

You can be tested at the local health department, community clinic, or a private doctor. The National STD Hotline can look up free or low-cost clinics in your area. You can call them at 1-888-227-8922, Monday through Friday, 9 a.m. to 6:00 p.m. or visit their website at www.ashastd.org

STD's can cause physical symptoms like bumps or sores on the skin, itchy discharge, painful or burning urination, fever or flu like symptoms. However, some STD's do not cause any symptoms at all. Sometimes it takes weeks, months, or years before symptoms show; however, the disease can still be spread.

It is not very likely to get an STD from a public restroom. Most STD's are only transmitted during sexual contact, either by skin-to-skin contact or through body fluid exchange. Getting an STD from kissing is possible but not very common. STD's can be transmitted during oral sex.

Chlamydia is one of the most common STD's and is caused by bacteria.

Gonorrhea is also caused by bacteria. It can infect various parts of the body including the genitals, rectum, throat, and eyes. Symptoms include frequent and painful urination with a discharge from the penis or vagina.

Syphilis is a highly contagious disease. If left untreated, it progresses through three stages, each more serious than the last. The first signs of syphilis are small painless sores on the penis or within the

vagina. These sores are highly infectious. In the second stage the bacteria circulates through the bloodstream and causes more serious rashes on the palms and soles of the feet. The third stage involves infection of any body organ, including the heart, lungs, and brain.

Genital warts result from infection of the skin by the Human Papillomavirus (HPV). Warts are also one of the most common STD's. Without treatment, genital warts will stay the same or progress.

Genital herpes is a recurrent, lifelong infection caused by a virus known as herpes simplex type-2. It is spread primarily through genital fluids and is highly contagious. Following the initial bout, the virus "goes into hiding" within the nerves of the body, and reappears intermittently in a milder form. During these reoccurrences the virus can be transmitted to a sexual partner and can be given to an infant during childbirth.

The use of a latex condom is the most effective means of preventing the transmission of disease during sexual contact.

If you suspect you have contracted any form of an STD, see your doctor immediately. Even the curable diseases can cause serious or life-threatening conditions if left untreated. If your doctor tells you that you have an STD, tell any sexual partners so they can also seek treatment immediately.

What is HIV and AIDS?

AIDS stands for Acquired Immune Deficiency Syndrome. It is a disease caused by the Human Immunodeficiency Virus (HIV). HIV attacks the immune system which is the part of our bodies that protects us against infections and illnesses. People with AIDS become very ill and die because their bodies cannot fight off diseases.

What is the difference between AIDS and HIV?

HIV is the virus that causes AIDS. A person can be infected with HIV and not have AIDS or ever get AIDS. Once infected, the average time it takes to develop AIDS is about ten (10) years. For infants and some adults, this time may be much shorter depending on the health of the immune system that fights the disease. Symptoms may appear anywhere from a few weeks to many years after infection.

What are the symptoms of AIDS?

Symptoms of HIV/AIDS are similar to those of many other diseases. Only a medical doctor can diagnose AIDS. Common symptoms include fatigue, chills, night sweats, swollen glands, pink to purple spots on skin, white spots and sores in mouth, persistent diarrhea, weight loss of ten (10) pounds or more, a dry heavy cough, shortness of breath, and repeated serious vaginal yeast infections in women.

What behaviors increase the chance of getting AIDS?

You are at risk if you have oral, vaginal, or anal intercourse with a person infected with HIV, or share intravenous needles with an infected person. A pregnant woman who is infected can infect the unborn child. Anyone who had a blood transfusion between 1978 and 1985 may be at risk. Having had sex with multiple partners is also a high risk.

How can you protect yourself?

Abstain from oral, vaginal, or anal sex and do not have sex with anyone unless you know he or she is not infected. Use a condom every time you have sex. Abstain from sex with multiple partners. Use “universal precaution” guidelines to protect yourself at work or anywhere you may come in contact with blood, pre-seminal fluid, semen, vaginal secretions, or breast milk, regardless of whom the fluid comes from.

What is the AIDS test?

A blood test known as the HIV antibody test is the only way to know if a person is infected with the HIV virus. It takes six (6) weeks to six (6) months for a test to be positive once a person is infected. A positive test means the person is infected and can pass the HIV virus to someone else.

What types of close contact are safe?

HIV is not spread by touching, kissing, sneezing, coughing, sharing silverware, cups or plates with an infected person. You cannot get the virus from swimming pools, bathtubs, showers, toilet seats, drinking fountains or insect bites. It is completely safe to donate blood and it is very rare that someone gets HIV from a blood transfusion.

Should I be concerned about getting AIDS?

Yes, if you have unprotected oral, vaginal, or anal sex with someone you do not know or if your partner is infected with HIV. You are also at risk if you or your partner shoot drugs, share needles, or have had a blood transfusion, organ transplant or hemophilia treatment between 1978 and 1985. You cannot tell if someone is infected by looking at them. If you are concerned about possible exposure get HIV tested.

What is the difference between safe and safer sex?

Safe sex is not having oral, vaginal, or anal sex at all. Safer sex is using a condom every time you have sex.

How do condoms help?

Sex is a major way that bodily fluids such as blood, semen and vaginal secretions are exchanged between people. A latex condom prevents these fluids, which carry HIV, from being passed between partners.

How safe are condoms?

Condoms are not 100% safe, especially when they are not used every time or are used wrong. In order to get the best possible protection, you need to use a latex condom every time you have sex, and use it correctly. If you have questions about using a condom, talk to your nurse, doctor, pharmacist, health department, AIDS service organization, or call the National AIDS hotline at (1-800-342-AIDS).

What do I need to know about condoms?

The most important thing to know is how to use a condom correctly. A condom may tear or break if used incorrectly.

Use only latex condoms with a water-based lubricant. Animal skin condoms are available for those with latex allergies; however, they will not protect you against HIV infection.

Remember, a latex condom must be used every time you have sex and it must be used correctly to get the best protection.

What if my partner will not use a condom?

Remind your partner that latex condoms add protection against spreading HIV, herpes, syphilis, and gonorrhea. They also help prevent pregnancy. Latex condoms can save lives. Make a choice; do not have sex without using a condom.

What is a spermicide?

A spermicide is a substance that kills sperm; however, their ability to kill HIV in the vagina during sex is uncertain. Spermicides alone should not be used for HIV protection.

Why is AIDS considered an epidemic?

Right now, there are no medicines to prevent AIDS. The long period between contracting HIV and developing symptoms, make AIDS very difficult to control. Millions of symptomless people may be HIV positive and not know it. Unless we protect ourselves against AIDS, millions more will become infected and die. However, there are many new medications on the market to treat HIV once there is a positive test. These medications are being used to slow the disease process and boost the immune system response that has been weakened.

Hepatitis: Questions and Answers***What is Viral Hepatitis?***

Hepatitis is an inflammation of the liver caused by medications, alcohol, poisonous mushrooms, or a variety of other agents including the viruses that cause mumps, measles, herpes and infectious mononucleosis. However, when health professionals talk about viral hepatitis, they usually mean hepatitis caused by the hepatitis A, hepatitis B, or hepatitis C virus. Although these viruses have similar names, they are quite different clinically and genetically.

How can I protect myself from infection?

Because the different viruses that cause hepatitis enter the body in different ways, there are several steps you can take to protect yourself from infection. Good hygiene, proper food preparation, and safe sex are good first steps. For more specific information, see the individual sections for hepatitis A, B & C.

What are the symptoms of Viral Hepatitis?**Early symptoms:**

- Fatigue
- Loss of appetite
- Low-grade fever
- Tenderness in the upper right abdomen
- Malaise (generalized feeling of discomfort)
- Sore joints and muscles
- Nausea, vomiting and diarrhea

Later symptoms:

Jaundice - abnormally yellow skin & eyes caused by elevated bilirubin (a byproduct of the breakdown of red blood cells in the blood)

Darkened urine; light-colored or gray stool

However, many other conditions can cause similar symptoms, including food-borne illnesses, autoimmune disorders, viral or bacterial infections, and reactions to medications or toxins.

How is it diagnosed?

Although health providers use information about a person's symptoms, health history and behaviors to help make a diagnosis, only blood tests can confirm the diagnosis and determine which type of hepatitis a person has, and whether the infection is acute or chronic.

UAMS-CAST PATIENT EDUCATION SHEET / HEPATITIS PG 1 of 7 GM 10/2013

How is Viral Hepatitis treated?

Since there's no medication that can treat the initial (acute) infection of viral hepatitis, health professionals manage symptoms as they occur and try to help the body's immune system fight the infection. **If you have viral hepatitis:**

- DO NOT DRINK alcohol. Ask your provider about the safety of using prescription and over-the-counter (OTC) drugs, including birth control pills, vitamins, herbals, Vitamin C and supplements.
- Drink high-calorie fluids such as fruit juices and eat a balanced diet that includes dairy products; meat, poultry or seafood; breads and cereals; and fruits and vegetables. (To control nausea, try eating several smaller meals.)
- Limit activity if your hepatitis is symptomatic; this typically means bed rest at first, progressing to normal activity as symptoms disappear.

Your health professional may recommend hospitalization if you experience severe vomiting or do not feel better after several weeks.

HEPATITIS A

The Centers for Disease Control (CDC) estimates that 25,000 people were infected with Hepatitis A in 2007. Hepatitis A rates in the US have fallen 92% since the introduction of vaccine in 1995. In the United States, most infections result from close personal contact with an infected household member or sex partner. Less often, infection results from eating or drinking something that has been contaminated with the stool (feces) of an infected person. This type of transmission is called "fecal-oral". The hepatitis A virus (HAV) can live outside the body for months. Heating the virus to 185 degrees F (85 degrees C) for one-minute kills it. Chlorination kills HAV which enters the water supply. Some facts about Hepatitis A

The average incubation period (time from exposure to symptoms) for hepatitis A is 28 days (range 15-50 days). Symptoms usually last less than two months, rarely, up to six months.

The virus usually causes mild illness and is often mistaken for a stomach virus, although occasionally symptoms are more serious. It is rarely fatal and does not cause permanent liver damage.

The hepatitis A virus does not cause long-term, chronic symptoms that other hepatitis viruses can cause.

The CDC considers these groups to be at increased risk for acquiring Hepatitis A infection:

- Travelers to countries with high or intermediate endemicity of HAV infection

- Men who have sex with men
- Users of injection and non-injection illegal drugs
- Persons with clotting factor disorders
- Persons working with nonhuman primates susceptible to HAV infection

UAMS-CAST PATIENT EDUCATION SHEET / HEPATITIS PG 2 of 7 GM 10/2013

What behaviors could put me at risk for infection with the Hepatitis A virus?

- Eating contaminated food, such as undercooked shellfish from contaminated water or food handled by someone who has hepatitis A.
- Using utensils, cups or glasses that an infected person touched with unwashed hands.
- Changing diapers or linens that contain stool from someone with hepatitis A and neglecting to wash your hands.
- Sharing food with an infected person or drinking water contaminated with sewage.
- Oral or anal sexual contact with an infected person.
- Traveling to developing countries where the disease is common.
- Although hepatitis A has been transmitted by blood transfusion, this is very rare. Sharing needles for intravenous drug use has potential for transmission of hepatitis A.

What can be done to prevent Hepatitis A?

- Practice good personal hygiene. Always wash your hands after changing diapers, when cleaning or after using the toilet; and before preparing or eating food.
- Avoid foods that could be contaminated, such as under-cooked shellfish or food that has been prepared by someone who has the virus.
- When traveling to developing countries, drink only bottled or boiled water, don't use ice, and don't eat raw fruits or vegetables unless they've been peeled by you.
- If you inject drugs intravenously, do not share needles.
- Caregivers of persons with acute hepatitis A should observe precautions in their contacts with the infected persons for about two weeks if the person is an otherwise healthy adult and up to six months if a child or immunocompromised adult.

What if I've been exposed?

- If you think you have been directly exposed to the hepatitis A virus, visit your health care provider immediately for treatment.
- Some treatments can help fight the infection if administered within two weeks (hepatitis A vaccine and Immune globulin G). All people who have close household or sexual contact with an infected person also need treatment.

If I'm infected, how do I keep from infecting others?

- Always wash your hands well after using the toilet. Don't prepare or handle food for others while you are infectious.
- Avoid sexual contact with other people until you are fully recovered.

HEPATITIS B

-Hepatitis B is a disease caused by the Hepatitis B Virus (HBV), which is transmitted through percutaneous (i.e. puncture through the skin) or mucosal (i.e. direct contact with mucous membranes) exposure to infectious blood or body fluids.

Although the rate of new Hepatitis B infections has fallen by an estimated 82% since 1991 (when routine vaccination of children began) it is still widespread. In 2007, an estimated 43,000 people in the United States were infected with HBV. Rates are particularly high among males aged 25-44 years.

About 50% of adults with acute infection have no symptoms; most children with acute Hepatitis B are also asymptomatic. The mortality rate for acute Hepatitis B is 0.5-1.0%.

The CDC estimates that 800,000–1.4 million persons in the United States have chronic HBV infection and about 2,000-4,000 die each year from HBV-related cirrhosis or liver cancer. Worldwide, approximately 350 million people have chronic HBV: 620,000 die from HBV-related liver disease annually.

Some facts about Hepatitis B

- The average incubation period is 90 days (range 60-150 days) from exposure to onset of early symptoms (see above). Jaundice develops 2-10 days later.
- If symptoms occur, they occur on the average of 12 weeks (range 9-21 weeks) after exposure to hepatitis B virus.
- Chronic infection develops in approximately 90% of infected infants, 25-50-% of infected children 1-5 years old, and about 5% of infected adults.
- Even if they have no symptoms, persons with chronic infection can transmit the virus to others ("carrier" state).

Modes of Transmission of Hepatitis B

- Sex with an infected partner
 - Injection drug use that involves sharing needles, syringes, or drug-preparation equipment
 - Birth from an infected mother
 - Contact with blood or open sores of an infected person
 - Needle sticks or sharp instrument exposures
 - Sharing items such as razors or toothbrushes with an infected person
- HBV is not spread through food or water, sharing eating utensils, breastfeeding, and hugging, kissing, hand holding, coughing, or sneezing.
- Although HBsAg (an antibody to the HBV) has been detected in multiple body fluids, only (blood) serum, semen, and saliva have been demonstrated to be infectious.

UAMS-CAST PATIENT EDUCATION SHEET / HEPATITIS PG 4 of 7 GM 10/2013

The CDC considers the following groups to be at higher risk for HBV infection:

- Infants born to infected mothers
- Sex partners of infected persons
- Sexually active persons who are not in a long-term, mutually monogamous relationship (e.g., less than one (1) sex partner during the previous 6 months)
- Men who have sex with men
- Injection drug users

- Household contacts of persons with chronic HBV infection
- Healthcare and public safety workers at risk for occupational exposure to blood or blood-contaminated body fluids
- Hemodialysis patients
- Residents and staff of facilities for developmentally disabled persons
- Travelers to countries with intermediate or high prevalence of HBV infection

What can be done to prevent Hepatitis B?

- If you are at risk of contracting hepatitis B, get vaccinated. The hepatitis B vaccine is an inactivated antigen (genetically engineered; not a live or killed virus). It is administered in a series of three injections over a six-month period. Approximately 95% of persons who receive the three injections develop full immunity after receiving the vaccine. (Persons who are allergic to yeast should not receive the HBV vaccine.)

- Also, avoid high-risk behaviors and practice good personal hygiene when sharing food, kitchens, and bathrooms, especially if you live with someone who is infected with the hepatitis B virus. The virus can live outside the body for at least seven days. Wear gloves and use a 1:10 dilution of household bleach to clean up blood spills. Do not share razors, toothbrushes or pierced earrings with anyone.

What if I've been exposed?

- If you have not been vaccinated against hepatitis B, but are exposed to the virus, your health professional can treat you with hepatitis B immune globulin (HBIG), combined with the hepatitis B vaccination. Studies have shown that HBIG, if given within one week of exposure, is about 75% effective at preventing HBV infection.

How is Chronic Hepatitis B treated?

There are several antiviral medications available for the treatment of chronic hepatitis B, although it is not always curable. Adefovir dipivoxil, interferon alfa-2b, PEGylated interferon alfa-2a, lamivudine, entecavir, and telbivudine are six drugs used for the treatment of persons with chronic hepatitis B.

UAMS-CAST PATIENT EDUCATION SHEET / HEPATITIS PG 5 of 7 GM 10/2013

HEPATITIS C

Some facts about Hepatitis C:

- The average time period from exposure to symptom onset is 4-12 weeks (range 2-24 weeks).
- Hepatitis C is less likely than the other hepatitis viruses to cause serious illness at first (only 20-30% of persons with acute Hepatitis C actually develop symptoms); about 75-85% of those infected develop chronic infection and 60-70% develop chronic liver disease. Hepatitis C is the most common reason for liver transplants.
- The CDC estimates there were 17,000 new HCV infections in the US in 2007.
- Approximately 3.2 million persons in the US have chronic HCV infection.
- Like hepatitis B, hepatitis C can be spread by contact with infected blood. It can be spread by sexual contact, but this happens infrequently, particularly between monogamous partners. Most infections are due to illegal injection drug use.

The CDC considers these groups to be at increased risk for Hepatitis C:

- Current or former injection drug users, including those who injected only once many years ago.
- Recipients of clotting factor concentrates made before 1987, which is when more advanced methods for manufacturing those products were developed.
- Recipients of blood transfusions or solid organ transplants before July 1992, when better testing of blood donors became available.
- Chronic hemodialysis patients.
- Persons with known exposures to HCV, such as healthcare workers after needle-sticks involving HCV-positive blood and recipients of blood or organs from a donor who tested HCV-positive.
- Persons with HIV infection.
- Children born to HCV-positive mothers

HCV can live outside the body for at least 16 hours, but not more than four days.

Wear gloves and use a 1:10 dilution of household bleach to clean up blood spills.

Additionally: The average risk for perinatal (during birth) HCV transmission is 5-6% (range 0-25%)

If co-infected with HIV, the average risk for perinatal infection is about 14% (range 5-30%).

What can be done to prevent Hepatitis C?

Since hepatitis C is transmitted in the same way as hepatitis B, you can help avoid infection by using the same precautions. Follow CDC guidelines regarding sexual practices that include: good personal hygiene; never share needles, razors, toothbrushes or pierced earrings with anyone. Currently, there is no vaccine available.

How is chronic HCV infection treated?

- Nucleotide/nucleoside and nonnucleoside polymerase inhibitors (NS5B inhibitors) are new medications that have recently been approved and licensed for the treatment of persons with chronic hepatitis C.
 - Sofosbuvir (Sovaldi) and Dasabuvir is currently the treatment of choice
- Alpha Interferon/peginterferon and ribavirin are two drugs licensed for the treatment of persons with chronic hepatitis C.
 - Interferon can be taken alone or in combination with ribavirin. Combination therapy, using pegylated interferon and ribavirin, is currently the treatment of choice for persons who do not respond to NS5B inhibitors.
 - Combination therapy can eliminate the virus in approximately 50% of persons with genotype 1 HCV and in approximately 80% of persons with genotype 2 and 3.

DELTA HEPATITIS

The delta virus (also known as hepatitis D) is an incomplete virus that may cause infection only in the presence of hepatitis B infection. The HDV may be acquired at the same time (co-infection) as HBV, or at a later time in a person with chronic HBV infection (super-infection). The symptoms and routes of transmission are similar to those of hepatitis B infection, but the risk of complications is higher. Acute liver failure is more likely with co-infection and cirrhosis is believed to be more common with chronic

HBV/HDV infection (super-infection). Since Hepatitis D requires prior or concomitant infection with HBV, vaccination against Hepatitis B protects against HDV.

HEPATITIS E

Hepatitis E is a liver disease caused by the Hepatitis E virus (HEV). However, it occurs rarely in the United States. It is spread in the same way as Hepatitis A. It does not result in chronic infection. There is currently no vaccine.

What is TB?

Tuberculosis (TB) is a disease caused by bacteria called Mycobacterium Tuberculosis. The bacteria usually attack the lungs. However, TB bacteria can attack any part of the body such as the kidney, spine, and brain. If not treated properly, TB disease can be fatal.

TB is spread through the air from one person to another. The bacteria are put into the air when a person with TB disease of the lungs or throat coughs, sneezes, speaks, or sings. People nearby may breathe in these bacteria and become infected.

However, not everyone infected with TB bacteria becomes sick. People, who are infected, but not sick, have what is called latent TB infection. People who have latent TB infection do not feel sick, do not have any symptoms, and cannot spread TB to others. However, some people with latent TB infection go on to get TB disease.

There is good news. People with TB disease can be treated if they seek medical help. Even better, most people with latent TB infection can take medicine so that they will not develop TB disease.

Should I get tested for TB?

You should be tested for TB if:

- You have spent time with a person known or suspected to have TB disease; or
- You have HIV infection or another condition that weakens your immune system and puts you at high risk for TB disease; or
- You have symptoms of TB disease; or
- You are from a country where TB disease is very common (most countries in Latin America and the Caribbean, Africa, Asia, Eastern Europe, and Russia); or
- You live somewhere in the United States where TB disease is more common such as a homeless shelter, migrant farm camp, prison or jail, and some nursing homes; or
- You inject illegal drugs.

Resources for You to Think About

There are many resources outside of this OTP that are available to you that can help you remain free from opioids, other drugs, and alcohol and self-harming behaviors. Here is a short list of some of those resources. As you find new resources that are helpful to you, please let your counselor know so we can add them to this list. Here you are:

Drug and Alcohol Recovery- Smart Phone Aps

Many 12 Step Aps

Online

<https://www.mara-international.org/> Medication Assisted Recovery Anonymous central website with links to local and online line meetings for persons utilizing Evidenced Based Treatments using medication as part of their recovery plan.

<https://www.aa.org/> Alcoholics Anonymous

<http://arkansascentraloffice.org/meetings/> Arkansas Central Office Alcoholics Anonymous

<https://www.na.org/> Narcotics Anonymous

<http://www.arscna.org/> Arkansas Regional Service Committee of Narcotics Anonymous

<https://www.intherooms.com/home/> In the Rooms (ITR) is an online recovery community that supports persons in recovery with a **“place to meet and socialize when they’re not in face-to-face meetings.”** This basic concept has grown into a global online community with over 650,000 members who share their strength and experience with one another daily. Through live meetings, discussion groups, and all the other tools In the Rooms has to offer, people from around the world connect with one another and help each other along their recovery journeys.” You can find a meeting through ITR on any day, any hour to attend from AA/NA, Alanon and Naranon to Trauma Survivors to Spiritual support as well as Wellbriety (Native American) and many more. ITR has a smartphone application that can be downloaded from Google Play or the Apple Store.

<http://www.buprenorphine.us/> “Buprenorphine.US is a privately owned, national online center dedicated to informing the public of the value of medication-assisted treatment (MAT) for opioid dependent individuals. Buprenorphine.US is accessible from anywhere in the world, but is specifically dedicated to U.S. consumers.” Website has education information for Patients, Family Members and Employers.

<http://www.stopstigma.org/> **“STOP STIGMA NOW (SSN)** was established to change prevailing attitudes towards people suffering from substance use disorders, which are preventing them from entering into and remaining in treatment.”

<http://www.methadone.org/> National Alliance for Medication Assisted Recovery. **“NAMA Recovery** is an organization composed of medication assisted treatment (**Methadone and Buprenorphine**) patients and health care professionals that are supporters of quality opiate agonist treatment. We have thousands of members worldwide with a network of international affiliated organizations and chapters in many places in the United States. The primary objective of NAMA Recovery is to advocate for the patient in treatment by destigmatizing and empowering medication assisted treatment patients. First and foremost, NAMA Recovery confronts the negative stereotypes that impact on the self-esteem and worth of many medication assisted treatment patients with a powerful affirmation of pride and unity.”

<https://www.artakeback.org/> Arkansas Take Back is a State of Arkansas Initiative to education the Arkansas Communities on the Opioid Crisis and providing information and connections with local community resources to assist persons in recovery, their families/friends.

<https://www.thesoberworld.com/> The Sober World online magazine presents “a wide range of resources located throughout the country for treatment and prevention suitable for yourself or a loved one. Each month we will offer articles from people who have found recovery, to doctors and clinicians that can offer valuable information.” You will find printed copies of this magazine in the waiting room for the taking at the beginning of each month, limited quantities are available.

CRISIS SERVICES

The Psychiatric Research Institute offers crisis services for patients who experience a crisis after regular business hours, including holidays and weekends. This handout provides you with necessary information about who to call in case of crisis situations.

For those who are in a medical crisis or at imminent risk of harming themselves or others, immediately call 911 and request to go to your nearest emergency room for assistance. The following numbers are also available to those who are having thoughts of self-harm but not at imminent risk:

Arkansas Crisis Hotline	1-888-274-7472
National Suicide Prevention Lifeline	1-800-273-8255

Patients in need of face to face contact after business hours are directed to go to the nearest emergency department where they can be seen by a physician and obtain psychiatric consultation as medically indicated.

PROTECTION AND ADVOCACY SERVICES

FORMS

PARKING AND LOITERING POLICY

All UAMS-CAST/ All PRI-Buprenorphine Treatment Program patients must park on Level 3 (P3) Parking One Deck located in the Psychiatric Research Institute. You may have your ticket stamped by the receptionist at checkout in order to leave the deck without charge.

Note: If you wish to use the designated PRI parking spots in the middle of the parking deck, a PRI hangtag is required. You may obtain a hangtag from the UAMS-CAST front desk. Please note, there may be an additional cost due to UAMS-CAST presently validates your parking ticket when you visit the clinic for free.

The UAMS-CAST/Buprenorphine Treatment Program is housed inside the Psychiatric Research Institute which contains two floors of inpatient units. In addition, we are attached to the UAMS Medical Center; therefore, it is important that our patients take extra effort to be courteous to our neighbors. The following rules and regulations will be strictly enforced and failure to follow them will result in loss of privileges or, in extreme cases, dismissal:

Patients are to park on Parking Deck 3 of Parking One at all times.

No loitering or noise are permitted in the parking deck. Patients are asked to leave the clinic and the parking deck immediately after any scheduled appointments.

The clinic and the parking deck are to be kept clean and free of any litter.

No Food or Drink is permitted inside of UAMS-CAST.

UAMS is a tobacco free campus; therefore, smoking, use of tobacco products of any kind to include vaping is prohibited in the clinic parking lot and across The UAMS Campus/McClellan VA Medical Center and the Arkansas State Hospital (See Smoking Policy elsewhere in the handbook).

Please avoid contact with pedestrians who are walking by the clinic and particular care should be made to avoid contact with children.

CENTER FOR ADDICTION SERVICES AND TREATMENT

LITTLE ROCK, ARKANSAS
PHONE: 501-526-8400 FAX: 501-526-8499

Notice of Take-Home Medication Recall Policy - Buprenorphine

Dear CAST Patient:

The UAMS – Center for Addiction Services and Treatment is committed to providing safe and effective treatment for opioid dependence. In order to insure the proper handling of buprenorphine take-home doses, the clinic has a policy of random recall of take-home medication. **Within this letter we want to inform you that as a patient who qualifies for more take-home medication, you will be part of the clinic’s random recall procedure.**

Patients receiving what is considered take-home medication (your prescription) are required to provide a working telephone or pager or cell phone number where he/she may be reached in case of a recall aka call-back. You ***must*** provide an active telephone or cell phone number before the take-home doses can be authorized. In addition, you are required to inform your counselor of any changes in status of the contact telephone or cell phone number. We **MUST** have a working number to reach you at all times.

The selection of patients to be recalled is made by a computer program in a way that is fair to all patients and proportional to the number of take-home doses you receive. We reserve the right to issue a callback at any time. When a recall notice is issued, you must present for medication count and Urine Drug Screen by 2:30pm the day after you have been called

Failure to have a functioning telephone number, voice mail, or failure to bring back the requested medication on the day of the recall may result in an intensification of your treatment.

If you are planning a vacation **you must notify your counselor in advance**. In case of an emergency the patient must call and talk to a nurse. You must bring documentation to verify your emergency

I understand I am required to follow the above Medication Recall Policy.

This is the telephone number to contact me in case of a recall: Home: _____

Cell: _____ Work: _____ Pager: _____ Other: _____

NOTICE OF PRIVACY PRACTICES

Effective Date: April 8, 2013

THIS NOTICE DESCRIBES HOW MEDICAL INFORMATION ABOUT YOU MAY BE USED AND DISCLOSED AND HOW YOU CAN GET ACCESS TO THIS INFORMATION. PLEASE REVIEW IT CAREFULLY.

This Notice is provided on behalf of the University of Arkansas for Medical Sciences including its Medical Center and clinics, Psychiatric Research Institute, Area Health Education Centers, and other facilities ("UAMS"). UAMS provides patient care through a healthcare system committed to education and research.

PURPOSE: This Notice of Privacy Practices describes how we may use and disclose your Protected Health Information to carry out treatment, payment or healthcare operations and for other purposes permitted or required by law. "Protected Health Information" is information that may identify you and that relates to your past, present or future physical or mental health, and may include your name, address, phone numbers and other identifying information.

We are required to give you this Notice and to maintain the privacy of your Protected Health Information. We must abide by this Notice, but we reserve the right to change the privacy practices described in it. A current version of this Notice, with required revisions, if any, may be obtained from the UAMS web site, <http://www.uamshealth.com/> and will be posted in prominent areas of our facilities. You may also receive a current copy by sending a written request to the UAMS HIPAA Office, 4301 W. Markham #829, Little Rock, AR 72205.

We understand that medical information about you and your health is personal and confidential, and we are committed to protecting the confidentiality of your medical information. We create a record of the care and services you receive at UAMS. We need this record to provide services to you and to comply with certain legal requirements. This Notice will tell you about the ways we may use and disclose your information. We also describe your rights and certain obligations we have to use and disclose your health information.

If you believe your privacy rights have been violated, you may complain to us or to the U.S. Secretary of Health and Human Services. To file a complaint with us, you may send a letter describing the violation to the UAMS Privacy Officer, 4301 W. Markham #829, Little Rock, AR 72205. There will be no retaliation against you for filing a complaint.

If you have questions or need more information, contact the UAMS HIPAA Office at 501-614-2187.

WHO WILL FOLLOW THIS NOTICE: This Notice describes the practices of UAMS healthcare professionals, employees, volunteers and others who work or provide healthcare services at any UAMS facility, including students-in-training.

ACKNOWLEDGMENT: You will be asked to sign an Acknowledgment of receipt of this Notice. The delivery of your healthcare services will in no way be conditioned upon the signing of this Acknowledgment.

Your Privacy Rights. You have the following rights relating to your Protected Health Information. You may:

- Obtain a current paper copy of this Notice.
- Inspect or obtain a copy of your records, in paper or electronic form. You may be charged a fee for the cost of copying, mailing or other supplies. We are allowed to deny this request under certain circumstances. In some situations, you have the right to have the denial of your request reviewed by a licensed healthcare professional identified by UAMS who was not involved in the original denial decision. We will comply with the outcome of this review.
- Request that we amend your record, if you feel the information is incomplete or incorrect. We are allowed to deny this request in certain circumstances and may ask you to put these requests in writing and provide a reason that supports your request.
- Request in writing a restriction on certain uses and disclosures of your information. We are not required to agree to the requested restrictions, unless you are requesting to restrict certain information from your health plan and you have paid for your UAMS services in full.
- Obtain a record of certain disclosures of your Protected Health Information.
- Make a reasonable request to have confidential communications of your Protected Health Information sent to you by alternative means or at alternative locations.
- Provide us with written permission for uses and disclosures of your Protected Health Information that are not covered by the Notice or permitted by law. Except to the extent that the use or disclosure has already occurred, you may cancel this permission. This request to cancel must be put in writing.
- Submit any written requests to inspect, copy or amend your records to the UAMS Health Information Management Department.

Our Responsibilities. We are required to protect the privacy of your Protected Health Information, abide by the terms of the Notice, and make the Notice available to you. We are also required to notify you if a breach of your health information occurs.

Examples of Uses & Disclosures

We will use your Protected Health Information for treatment. Certain information obtained by a nurse, doctor, therapist, or other healthcare worker will be put into your record and used to plan and manage your treatment. We may provide reports or other information to your doctor or other authorized persons who are involved in your care, including healthcare providers outside of UAMS. We may make your protected health information available electronically through an electronic health information exchange.

to other health care providers and health plans that request your information for their treatment and payment purposes. Participating in an electronic health information exchange may also let us see their information about you for our treatment and payment purposes.

We will use your Protected Health Information for payment. A bill will be sent to you and/or your insurance company with information about your diagnosis, procedures and supplies used. We may also disclose limited information about your bill to others, such as a collection agency, to obtain payment.

We will use your Protected Health Information for regular healthcare operations. UAMS may use your Protected Health Information to check on the care you received, how you responded to it, and for other business purposes related to operating the hospital or clinics. UAMS is a teaching facility, and information about you may be shared with students and trainees for teaching purposes.

Business Associates: We may share some of your Protected Health Information with outside people or companies who provide services for us, such as typing physician reports.

Patient Directory: Unless you tell us not to, we may disclose your name, location in the facility, and general condition to people who ask for you by name. If provided by you, your religious affiliation may also be given to members of the clergy.

Notification: We may use or disclose your Protected Health Information to notify a family member or other person involved in your care, your location and general condition unless you tell us not to do so.

Communication with family: We may share your Protected Health Information with a family member, a close personal friend, or a person that you identify, if we determine they are involved in your care or in payment for your care, unless you tell us not to do so.

Research: Your Protected Health Information may be used for research purposes in certain circumstances with your permission, or after we receive approval from a special review board whose members review and approve the research project.

Coroners, Medical Examiners, Funeral Directors: In the event of your death, we may disclose your Protected Health Information to these people, to the extent allowed by law, so that they may carry out their duties.

Organ Donor Organizations: We may share your Protected Health Information with the organ donation agency for the purpose of tissue or organ donation in certain circumstances and as required by law.

Contacts: We may contact you to provide appointment reminders or to tell you about new treatments or services.

Fundraising and Marketing: We may contact you as part of UAMS fundraising or marketing efforts. You have a right to opt out of fundraising communications and may do so by calling 1-888-995-UAMS (8267) or emailing advancement@uams.edu.

Food and Drug Administration (FDA): We may share your Protected Health Information with certain government agencies like the FDA so they can recall drugs or equipment.

Workers Compensation: We may disclose your Protected Health Information for workers' compensation claims.

Public Health: We may give your Protected Health Information to public health agencies who are charged with preventing or controlling disease, injury or disability and as required by law.

Communicable Disease: We may disclose your Protected Health Information to a person who may have been exposed to a communicable disease or may otherwise be at risk of contracting or spreading the disease or condition, if authorized by law to do so, such as a disease requiring isolation.

Correctional Institution: If you are an inmate of a correctional institution, we may disclose your Protected Health Information to the institution or law enforcement as needed for your health or the health and safety of others.

Law Enforcement: We must disclose your Protected Health Information for law enforcement purposes as required by law.

As Required by Law: We must disclose your Protected Health Information when required by federal, state or local law, such as to report gunshot wounds.

Health Oversight: We must disclose your Protected Health Information to a health oversight agency for activities authorized by law, such as investigations and inspections. Oversight agencies are those that oversee the healthcare system, government benefit programs, such as Medicaid, and other government regulatory programs.

Abuse or Neglect: We must disclose your Protected Health Information to government authorities that are authorized by law to receive reports of suspected abuse or neglect involving children or endangered adults.

Legal Proceedings: We may disclose your Protected Health Information in the course of any judicial or administrative proceeding or in response to a court order, subpoena, discovery request or other lawful process, as allowed by law.

Required Uses and Disclosures: We must make disclosures when required by the Secretary of the Department of Health and Human Services to investigate or determine our compliance with the HIPAA Privacy Regulations.

To Avoid Harm: We may use and disclose information about you when necessary to prevent a serious threat to your health or safety or the health or safety of the public or another person.

For Specific Government Functions: In certain situations, we may disclose Protected Health Information of military personnel and veterans. We may disclose your Protected Health Information for national security activities required by law.

Sale of Information: UAMS will not sell your information without your prior written authorization or as otherwise allowed by law.

Patient's Name:

Patient's Address:

Patient Status: ☐ Inpatient ☐ Outpatient

Admission/Consent Agreement

1. **Consent for Medical Treatment:** I now voluntarily consent to inpatient and/or outpatient care and treatment by physician and all other health care providers at UAMS Medical Center Psychiatric Research Institute (PRI). UAMS is a teaching facility where medical students, residents and others in a training program will be involved in my care and treatment under the supervision of a qualified professional. I also consent to routine hospital services, diagnostic procedures, medical treatment, and other services and care as deemed necessary by the health care providers treating me. Except in emergency situations, it is the provider's responsibility to adequately inform me or my representative concerning proposed treatment and to obtain my or my representative's consent. I understand that the practice of medicine is not an exact science and there is no guarantee that any particular treatment will be successful. I understand that I have the right to consent or refuse to consent to any proposed treatment and to discuss it with my health care provider. I understand and give authorization for my physician to access information from an online pharmacy data base about medications that I may be taking for the purpose of continued treatment.
2. **Inpatient Nursing Care:** UAMS PRI provides general duty nursing care unless additional care is required in special care units.
3. **Personal Information:** I certify that the information I have provided is true and accurate to the best of my knowledge. I understand this information is subject to verification with credit agencies, federal and/or state agencies and others as required. I authorize my employer to release to UAMS proof of my income. I consent to provide my cell phone number to UAMS, their designated collection agency, or attorney for them to contact me directly, by an automated dialing system or through a prerecorded messaging system to discuss payment of any unpaid financial obligation I have at UAMS PRI.
4. **Valuables:** I understand that UAMS PRI is not responsible for any valuables that I keep in my possession while in the hospital. I understand that valuables should be sent home with family / friends and those that cannot be sent home may be stored in the hospital safe.
5. **Assignment of Benefits:** In consideration of services rendered, I hereby assign any benefits due under my insurance coverage, benefits or inpatient/outpatient services to UAMS Medical Center/PRI and/or to physician services for my treating physicians. I understand I am financially responsible for all charges not covered including deductibles, co-pays, and co-insurance. After reasonable notice, accounts not paid may be turned over to a collection agency and/or attorney. Attorney fees, the cost of collection and court costs will be the patient's responsibility.
6. **Release of Information:** I understand my information will be released in accordance with UAMS Notice of Privacy Practice.
7. **Preauthorization Requirements:** It is the responsibility of the patient or insured to comply with all preauthorization requirements of any insurance or medical/hospital coverage plan that is relied on for coverage.
8. **Discharge:** I agree to prompt discharge following my physician's order for discharge. If I leave against medical advice (AMA) or elope, I release the physician, or other health care providers, UAMS Medical Center/PRI and FGP, its employees, agents, and assigns from any and all responsibility from any ill effects, sickness, disability, infirmity, damages, death and claims that may result.
9. **Tobacco Use:** UAMS is a TOBACCO FREE CAMPUS. I understand that I may not use any tobacco product on campus.
10. **Living Will:** In accordance with Arkansas Rights of the Terminally Ill or Permanently Unconscious Act (Ark. Code Ann. Section 10-17-201 through 218, Supp. 1989). I acknowledge receipt of information regarding the living will and health care power of attorney.
11. I understand that all patient rooms, hallways, and other areas of PRI are monitored by video recordings for security and safety reasons.

I, or my legal representative have read and agree to the above.

Patient's Name:

Patient's Address:

UAMS Psychiatric Research Institute Patient's Rights & Responsibilities

I. Patient Rights

- A. The patient has the right to expect appropriate psychiatric care regardless of race, disability, color, religion, national origin, sexual orientation, spiritual beliefs, or the patient's source of payment.
- B. The patient has the right to be treated with respect, to be addressed by proper name without undue familiarity, to be listened to when requesting information, and to receive an appropriate and timely response.
- C. The patient has the right to privacy and confidentiality in all aspects of care. The patient's records will be treated as confidential. The patient is entitled to privacy when examined - to have the door closed, to have observers identified, and to be informed of the role they play in patient care. The patient may ask any individual to leave the room, and has the right to restrict visitors.
I understand that the following alcohol and drug treatment records may be protected by federal law, Confidentiality and Drug Abuse Patient Records, 42 Code of Federal Regulations Part 2, and Health Insurance Portability and Accountability Act (HIPAA), 45 C.F.R. Parts 160 & 164, and cannot be disclosed without my written permission, unless otherwise allowed by law. Further restrictions may apply.
- D. The patient has the right to an explanation of all charges.
- E. The patient has the right to know the name of the clinician responsible for his/her care, to talk with that clinician, and to obtain information necessary for an understanding of his/her problems.
- F. The patient has the right to have an advance directive (such as a living will, health care proxy, or durable power of attorney for care) concerning treatment with the expectation that PRI will honor the intent of the directive to the extent permitted by law and policy.
- G. The patient has the right to be informed of the course of treatment and to receive an explanation of any planned procedures. If an interpreter is required, one will be obtained for the patient.
- H. The patient has the right to be involved in decisions about care, treatment and services and to refuse treatment.
- I. The patient has the right to be advised when the clinician is considering the patient as part of a clinical research program, and the patient must give informed consent prior to actual participation in such a program. After the details of the program have been explained, the patient may refuse to participate and may cancel participation at any time. The decision will not change the right of the patient to receive treatment.
- J. The patient has the right to express any grievance orally or in writing without fear of reprisal. The patient has the right to discuss the concerns with the physician, nurse manager or therapist.
- K. If the patient's concerns are not addressed at the program level, the patient may also contact the Psychiatric Research Institute Patient Service Representative at (501) 526-8100 for Walker Family Clinic, (501) 364-5150 for the Child Study Center, (501) 526-8201 for Women's Mental Health Clinic, or (479) 750-2742 for PRI Northwest AR.
- L. The patient has the right to obtain a personal advocate at any time.
- M. The patient has the right to have his/her pain recognized through an initial pain screening and referral, as indicated.

II. Patient Responsibilities

- A. The patient is responsible for taking an active role in the outcomes of his/her care. This is done in part by providing, to the best of his/her ability, accurate and complete information about present complaints, past illnesses, hospitalizations, medications, and other matters relating to psychiatric health; reporting perceived risks in care and unexpected changes in his/her condition; and providing feedback about service needs and expectations.
- B. The patient is responsible for asking questions when he/she does not understand the care provided or what is expected of him/her.
- C. The patient is responsible for following the care plan developed and expressing any concerns he/she might have about the ability to follow the care plan.
- D. The patient is responsible for accepting the consequences of the outcomes of care if the care plan is not followed.
- E. The patient is responsible for following the organization's rules and regulations.
- F. The patient is responsible for showing respect and consideration of the organization's staff and property as well as other clients and their property.
- G. The patient is responsible for meeting financial obligations agreed to with the organization.
- H. The patient is responsible for keeping appointments, and when the patient is unable to do so for any reason, for notifying the responsible practitioner.

I have read this statement of rights and/or it has been read to me. I have had an opportunity to ask questions and have them answered. I understand what my rights are and I have been given a copy of this statement.

NAME OF PERSON / TITLE / ORGANIZATION

ADDRESS / CITY / STATE / ZIP

TELEPHONE NUMBER

THE INFORMATION WHICH MAY BE DISCLOSED IS:

- ☐ Presence in treatment (admit/discharge dates).
- ☐ Medical history and physical examination.
- ☐ Diagnosis, brief description progress / prognosis.
- ☐ Psychiatric / psychological consultations / notes.
- ☐ Laboratory results: UDS / EKG / X-RAYS / PULMONARY FUNCTION TESTS RESULTS / PPD
- ☐ Other – Specify: _____

THIS INFORMATION IS NEEDED FOR THE FOLLOWING PURPOSE:

- ☒ For payment or health care operations activities

I understand that my substance use disorder records are protected under federal law, including the federal regulations governing the confidentiality of substance use disorder patient records, 42 C.F.R Part 2, and the Health Insurance Portability and Accountability Act of 1996 ("HIPAA"), 45 CFR, Parts 160 and 164, and cannot be disclosed without my written consent unless otherwise provided for by the regulations.

I understand that I may revoke this authorization at any time except to the extent that action has been taken in reliance on it. Unless I revoke my consent earlier, the duration for this consent is for the duration of my admission, and no longer than 120 days, after discharge unless I specify a date, and condition upon which it will expire as follows:

(date, event, or condition upon which consent will expires, which must be no longer than reasonably necessary to serve the purpose of this consent).

I understand that I may be denied services if I refuse to consent to disclosure for purposes of treatment, payment, or healthcare operations, if permitted by state law. I choose to do so willingly and voluntarily for the purpose specified above. I will not be denied services if I refuse to consent to a disclosure for other purposes.

Note: Any information released through this form will be accompanied by the form Prohibition of Re-disclosure concerning the Substance Use Disorder Patient (TR-1 (A-4400))

Please provide patient with a copy of this authorization after the patient signs.

JCB 10/14/2020

Center for Addiction Services & Treatment Buprenorphine Program Acknowledgement

Urine Drug Screens (UDS):

- UDS will be collected the day before appointment, day of or day after MD/PA appointment. UDS collection times: 6:30am-2:30pm each day.
- Please remember to come 15 minutes before MD/PA appointment so you can complete your UDS prior to your appointment. If you do not complete your UDS before your MD/PA appointment, your prescription will be held at the front desk until completed.

Missed Medication Management Appointments

- Zoom appointments will be on a case-by-case basis. You must be stable as determined by your treatment team and have a need for Zoom appointments.
- You will not be eligible to do zoom if you miss your UDS, miss an individual session and/or do not call in your payments.
- You may cancel and reschedule a medication management appointment 24 hours prior to the time of your appointment, one time a quarter.
- One emergency cancellation (less than 24 hours prior to the time of your appointment) will be accommodated per quarter).

Missed Appointments with the Therapist:

- If you miss your individual session, please know you will not be eligible to move up in Phase.
- From Phase II and up, if you miss an individual session, you must make it up by the next medication management appointment.
- If you are behind 1 individual session at your medication management appointment, you will be given a partial prescription. (Remainder of prescription will be left with therapist to be given to you after completing your individual counseling session.)
- If you are behind two individual sessions at your medication management appointment, you will be phased down.
- If you have a positive UDS and you have not shared your drug use with the MD/PA or the therapist, then you will be phased down. If you do share your drug use prior to your UDS result, you will remain in your current phase and be given the opportunity to provide a negative UDS at the next visit and get back on track. If the next UDS is positive then you will be phased down to intensify your treatment.

Phases for Patients in Suboxone Programs:

- Phase I, You will attend both individual and med management session weekly, until moved to next Phase
- Phase IA, (Cocaine, methamphetamine and non-prescribed Benzo positive patients after 4 weeks) You must attend med management every two weeks and see counselor every week. Your second weekly prescription will be provided only at the time of your individual counseling session for the second week
- Phase II, You will attend med management every two weeks and counseling every two weeks

- Phase IIA, (THC and prescribed Benzo positive patients). You will meet with therapist and med management every two weeks but these will be on alternating weeks. You will be provided the second week's prescription at the time of your individual counseling session
- Phase III, for anyone continuing to use THC and prescribed Benzo's.
- Phase IV, all stable patients. Negative UDS

Quarterly patient:

- If you are on Medicaid you cannot move to quarterly, you must be seen monthly and have a therapy appointment monthly.
- You can move to quarterly once you meet all the criteria, which includes:
 - Negative UDS for one year and no prescriptions for benzodiazepines
 - Made your individual and medication management sessions on a regular basis
 - MD/PA believes you are stable on your medications (i.e.- no loss, theft of or overtaking/undertaking your medications in the last year)
 - Must be able to make all callbacks (including medication count)
 - Have a phone with voice mail set up
 - Make your payments on time
 - Have a callback in the month before moving up to quarterly
 - Be determined to be clinically stable by the treatment team

Patients moved down from quarterly to monthly:

- If you move from quarterly to Phase IV, you will be seen by the MD/PA and therapist for at least three visits in Phase IV before being considered for return to Quarterly. If the team determines you are eligible then a call back will be done between the third and fourth Phase IV appointment. If you pass the call back then at the time of the fourth medication management appointment you will be provided a three month supply of medication (1 month with 2 refills)
- Therapist should review with you the above criteria to be in quarterly
- Moving back to quarterly is not a given, it is up to the treatment team which includes the therapist, clinic manager and MD/PA

or other images of me by UAMS. I understand that my photographs, videotapes, digital or other images may be used to assist with my identification, diagnosis and treatment and the payment of my bill. These images may also be used for UAMS Health Care Operations such as performance improvement and educational purposes within UAMS. Other than for treatment, payment and health care operations, images that identify me will be released outside UAMS only upon written authorization from me or my legal representative.

If the images are to be taken for any purpose other than for identification, diagnosis, treatment, payment or healthcare operations including teaching with UAMS, the purpose(s) must be stated here:

Withdrawal of Consent - I understand that I am not required to sign this Consent. I may revoke/withdraw the Consent at any time by giving written notice to UAMS [Dept/Clinic below] Slot # [below], 4301 W. Markham, Little Rock, AR 72205. A withdrawal of this consent will not apply to photographs, audio/visual recordings or other images used or disclosed prior to the written notice of withdrawal. **During the recording or filming, I have the right to stop the recording/filming at any time.**

Expiration Date - This consent to take my photograph or other image expires 30 days from the date I sign the consent or after the photographs and recordings are no longer needed by UAMS for the use that I am consenting to, whichever is later.

Release of Liability - I agree that UAMS including its governing Board, physicians, agents and employees, are hereby released from legal responsibility or liability for the access and release of my photographs or other images to the extent indicated and authorized herein.

CENTER FOR ADDICTION SERVICES TREATMENT
Consent to Opioid Maintenance Treatment

Name of Patient: _____ ID: _____

Dr. Michael Mancino//Dr.Nihit Kumar/Dr Srinivasa Gokarakonda/ PA Summer Mojica:

I hereby authorize and give voluntary consent to the Center for Addiction Services & Treatment (CAST) and its medical personnel to dispense and administer opioid pharmacotherapy (including methadone or buprenorphine) as part of the treatment of my addiction to opioid drugs. Treatment procedures have been explained to me, and I understand that this will involve my taking the prescribed opioid drug at the schedule determined by the program physician, or his/her designee, in accordance with Federal and State regulations.

It has been explained that, like all other prescription medications, opioid treatment medications can be harmful if not taken as prescribed. I further understand that opioid treatment medications produce dependence and, like most other medications, may produce side effects. Possible side effects, as well as alternative treatments and their risks and benefits, have been explained to me.

I understand that it is important for me to inform any medical provider who may treat me for any medical problem that I am enrolled in an opioid treatment program so that the provider is aware of all the medications I am taking, can provide the best possible care, and can avoid prescribing medications that might affect my opioid pharmacotherapy or my chances of successful recovery from addiction.

I understand that I may withdraw voluntarily from this treatment program and discontinue the use of the medications prescribed at any time. Should I choose this option, I understand I will be offered medically supervised withdrawal.

For Female Patients of Childbearing Age: There is no evidence that methadone or buprenorphine pharmacotherapy is harmful during pregnancy. If I am or become pregnant, I understand that I should tell my medical provider right away so that I can receive appropriate care and referrals. I understand that there are ways to maximize the healthy course of my pregnancy while I am in opioid pharmacotherapy.

PATIENT ACKNOWLEDGEMENT / TREATMENT CONSENT

I, _____, have received and reviewed copies of the following:

Patient Handbook
Patient Rights/Responsibilities
Admission Consent Form
Parking and Loitering Policy
Grievance Procedures
Program Phases Regulations

Privacy Practice Notice & Acknowledgment
Treatment Principles
Consent for Suboxone Treatment
General Information Consent
Fire and Emergency Procedures
3rd Party Non-Coverage Form

All of the handbook information and clinic policies will be reviewed with your counselor

I, furthermore, have signed this Patient Acknowledgement to verify I understand and agree to abide by these guidelines and responsibilities. I also understand that all treatment services are provided on a voluntary basis and that I have a right to discharge myself from treatment at any time. If I have been mandated to treatment, there may be consequences for leaving treatment prematurely but my participation remains a voluntary choice. Furthermore, I also give my:

GENERAL CONSENT FOR TREATMENT– I hereby authorize UMAS-CAST, the physician, and staff in charge of my care to administer treatments and diagnostic procedures as deemed necessary or advisable for diagnosis and treatment.

GUARANTEE OF PAYMENT– For, and in cooperation of, services rendered or to be rendered to the patient named above, I do hereby guarantee to pay UMAS-CAST the full and entire amount of any and all bills for my treatment.

PATIENT BILL OF RIGHTS– I have received a copy of the Patient Bill of Rights and the Patient Grievance Process and I have been given the opportunity to ask any questions I may have.

LIMITED CONFIDENTIALITY– UAMS-CAST is required to report to appropriate agencies knowledge of the following actions: Incest or Child Abuse; Elder Abuse; Threats of Homicide; Threats of Suicide. UAMS-CAST will also inform court ordered treatment, involvement with Child Protective Services, etc. of your decision to leave.

NOTICE OF PRIVACY PRACTICES– I acknowledge I have been provided with a copy of UAMS-CAST Notice of Privacy Practices that describes how my personal medical information may be used and Disclosed and how I can gain access to this information.

PATIENT RESPONSIBILITIES - I agree to follow UAMS-CAST Patient Responsibilities and follow all rules and regulations. Furthermore, I will refer to this handbook or speak to staff for any further information I may need.

Print Patient Name: _____

Admission Date: _____

RELEASE OF MEDICAL INFORMATION – I HAVE READ AND UNDERSTAND THE FOLLOWING and I authorize UAMS-CAST to release information from my medical records including psychiatric, substance use disorder, sickle cell anemia and HIV information if applicable. I understand that the information to be released is confidential and protected from re-disclosure. I also understand that I have the right to cancel my permission any time BEFORE it is released. I release UAMS-CAST from any liability incurred in permitting this release.

NO REFUND OR ABATEMENT AGREEMENT - I further understand and agree that if I voluntarily terminate my treatment there will be no refund of monies due to be paid to UAMS-CAST for treatment and/or scheduled treatment. If I am administratively discharged for conduct contrary to the rules and regulations of UAMS-CAST or for activities detrimental to the interests of UAMS-CAST or its patients, there will be no refund of monies. I understand that if I have any questions about the foregoing statement I am encouraged to ask staff members of UAMS-CAST.

COMPLIANCE

I further understand and agree that I must be meeting my program requirements as well as responsibilities and that I am abiding by all rules and policies governing my stay at UAMS-CAST. I understand that being compliant in this program is described as attending ALL individual sessions, group sessions, and Sober Support Group Meetings (i.e.. Twelve Step, Celebrate Recovery, SOS meetings) required for Phase level and maintaining negative urine drug screens by **abstaining from the use of all drugs, including alcohol.**

RELEASE OF LIABILITY

I do hereby release the University of Arkansas for Medical Sciences-Center for Addiction Services and Treatment, its employees, staff and any other CAST clients from liability related to allergic reactions, injury which may occur to me, my guests, or my property while engaged in any clinic functions, including, but not limited to group or counseling sessions held away from clinic grounds and/or clinic social events or activities. This release is given with the understanding that the UAMS-Center for Addiction Services and Treatment staff will not knowingly endanger, or put in jeopardy, the life or property of any client or family member of a client.

THIS CONSENT EXPIRES AT TIME OF DISCHARGE FROM THE UAMS-SUBSTANCE ABUSE CLINIC

Patient's Name:

Patient's Date of Birth:

Institute for Digital Health and Innovation

Telemedicine Information: UAMS Institute for Digital Health and Innovation Telemedicine appointments allow your image and Protected Health Information to be transmitted electronically through real-time electronic audio and video communications to physicians, healthcare professionals and other personnel at UAMS who are authorized to receive such information for the purpose of providing medical diagnostic assessment and treatment services.

Expected Benefits: Expected benefits of telemedicine include improved access to medical care, more efficient medical evaluation and management, and more convenience for patients.

Possible Risks: Telemedicine transmissions are secure and encrypted, but there is a very small possibility that the telemedicine transmissions could be intercepted by unauthorized persons (hackers). This risk is similar to the risk of a phone call being intercepted. Delays in medical treatment or loss of records could occur due to electrical outages or equipment failures. There are also limits to telemedicine technology. In rare cases, information transmitted may not be sufficient to allow for appropriate medical decision making, so there is no guarantee that a telemedicine appointment will eliminate the need for you to see a physician in person in order to receive appropriate treatment for your medical condition.

Consent: I understand that I have the right to consent or refuse any proposed surgery, procedure or treatment, and that I can withdraw my permission at any time prior to or during the telemedicine appointment. In either case, I understand that no action will be taken against me, and I may still pursue a consultation in person with a physician or other healthcare professional. I also understand that if I stop the telemedicine appointment, the appointment will be incomplete, and the healthcare professionals involved in the telemedicine appointment will be unable to provide treatment or services to me at that time. I further understand that UAMS is a teaching facility and I agree that residents, medical students, and others in training programs may be involved in my care and treatment under the supervision of a qualified professional.

Assignment of Benefits and Financial Information: In consideration of services rendered, I hereby assign any benefits due under my insurance coverage for outpatient and physician services to UAMS. I understand that it is my responsibility to comply with all pre-authorization requirements of any insurance or medical/hospital coverage plan that is relied on for coverage. I understand that I am financially responsible for all charges not covered, including deductibles, co-pays and co-insurance. After reasonable notice, accounts not paid may be turned over to a collection agency and/or attorney, and I understand I will be responsible for any related attorney's fees, costs of collection and court costs. I agree that UAMS, their designated collection agency, attorney or other authorized designee on behalf of UAMS may contact me on my cell phone, land line or any other number I provide, directly, through an automated dialing system or through an artificial or prerecorded voice system to discuss payment of any unpaid financial obligation. Health Information Exchange: UAMS participates in electronic Health Information Exchange (HIE). I understand that my UAMS health information will be sent to the HIE so it is available to health care providers who participate in my care outside of UAMS. I understand that I may opt out of this service by informing the registrar, but my UAMS health information may still be available to other providers in an emergency situation.

Release of Information: I understand that the laws that protect privacy and confidentiality of medical records also apply to telemedicine. I understand my Protected Health Information will be released in accordance with the UAMS Notice of Privacy Practices. I understand that my non-UAMS healthcare providers, such as my primary care physician, will be able to access my UAMS records electronically through such means that include, but are not limited to, the UAMS physician portal that is known as EpicCare Link.

Consent to Recording: I understand that the telemedicine consult will be recorded by UAMS, and the recording may be used for healthcare operations such as education, training and quality improvement. The recording will be securely maintained for up to thirty (30) days and then destroyed in accordance with applicable law and UAMS policies. I understand that the recording will be used for clinical care, payment and/or healthcare operations and will be securely maintained and destroyed in accordance with applicable law and UAMS policies. I understand that I have the right to request the recording be stopped at any time. This consent will expire twelve (12) months from the date I sign the consent or after the recordings are no longer needed by UAMS for the use that I am consenting to, whichever is later.

General CONFIDENTIAL INFORMATION AUTHORIZATION CONSENT

Initial Treatment Plan

Assignments

1. Please complete the recovery change plan and the miracle question worksheet. Bring to your next individual session.
2. Keep to your daily dosing schedule.
3. Review with your counselor what groups you will attend weekly.

RECOVERY CHANGE PLAN

1. The changes I need to make are:

2. The most important reasons why I want to make these changes are:

3. The steps I plan to take in these changes are as follows:

a. Person or people that can help me are: _____

b. Possible ways I can help myself are:

c. Things I need to do are:

4. I know my plan is working if:

5. Some things that can interfere with my recovery plan are:

Referencing YOUR Recovery Change Plan

Below, mark where you are now on this line that measures your change in the item(s) you listed in your plan (ref Item 1)

And/or _____

Are you not prepared to change?

Already changing?

or Are you somewhere in the middle?

0	1	2	3	4	5	6	7	8	9	10
Not ready for change						Ready for change				

THE “MIRACLE QUESTION”

Suppose one night, while you are asleep, there is a miracle, and the problem that brought you into treatment is solved. However, because you are asleep you don’t know that the miracle has already happened. When you wake up in the morning, what will be different that will tell you that this miracle has taken place?

1. What else?

2. How will your life be different?

3. Who will be the first to notice?

4. What will he or she do or say?

5. How will you respond?

STAGES OF CHANGE

WHERE AM I?

Please Read Definitions Below On “Stages of Change”

On day two of Treatment, you are to present to your group what stage of change you are in.
